

Raaz

Software Engineer | Node.js | Distributed Systems | API Infrastructure
9605633156 raazraz621@gmail.com [LinkedIn](#) [GitHub](#) [Portfolio](#)

Technical Skills

Languages: JavaScript (Node.js), TypeScript, Python, Java(basics), sql
Backend: NestJS, Express.js, REST API Design, JWT, OAuth2 (Google), Prisma ORM, Mongoose
Databases: PostgreSQL, MongoDB (Transactions, Aggregation Pipelines), Redis (Cache-Aside, Pub/Sub, Rate Limiting)
DevOps & Tools: Docker, CI/CD (GitHub Actions), AWS EC2/S3, Cloudflare, OpenAPI 3.0, Pino Logging
System Design: Microservices, Horizontal Scaling, Load Balancing, API Gateways, Task Queues, Read Replicas

Projects

TaskFlow — SaaS Team Task Management Platform — [GitHub](#)
NestJS, TypeScript, PostgreSQL, Prisma ORM, Passport.js, Google OAuth2, Docker 2026

- **Architecture:** Architected a modular NestJS REST API with dependency injection, designing stateless services structured for horizontal scaling and container orchestration via Docker.
- **Auth & Security:** Implemented Google OAuth2 social login alongside Argon2id-hashed JWT rotation with strict session tracking, enabling secure multi-provider authentication behind an API Gateway.
- **Domain Model:** Engineered a DAG-based task dependency engine and granular RBAC authorization, structuring PostgreSQL schemas with Prisma ORM for type-safe queries and read-replica compatibility.
- **Database & DevOps:** Designed compound indexes on paginated query paths to reduce sequential scans, containerized the full stack with Docker for reproducible deployments across environments.

Financial-Style Wallet & Reward Distribution — [GitHub](#) | [Live](#) | [API](#)
Node.js, Express 5, MongoDB, Redis, Docker, GitHub Actions, Pino, Swagger 2026

- **Performance:** Engineered a Redis Cache-Aside pattern for wallet balance reads, reducing primary database load by offloading repeated queries to an in-memory cache layer.
- **Reward Engine:** Automated reward distribution logic using MongoDB ACID transactions, ensuring idempotent credit/debit operations across concurrent requests in a multi-node environment.
- **Security:** Secured financial endpoints with granular Redis-backed rate limiting (Cloudflare-ready) and RBAC, mapping 20+ domain error scenarios through centralized error handling.
- **DevOps:** Dockerized the application runtime with GitHub Actions CI for automated unit testing, Integration testing using Jest and Supertest. maintained a comprehensive 37KB OpenAPI 3.0 specification for full API discoverability.
- **Error Handling:** Centralized error handling mapping 20+ domain scenarios, directly aligning with modern SDLC best practices for robust application delivery.

Experience

Freelance Software Developer Jun 2025 – Present
Self-Employed Remote

- Deployed full-stack applications on Render and Vercel; integrated Firebase for real-time data sync and push notifications, with AWS S3 pipelines for media storage.
- Designed production-ready REST APIs with JWT authentication, RBAC, and third-party integrations (AWS S3, Firebase), delivering iterative releases on structured database schemas.
- Translated business requirements into scalable technical specifications, establishing CI/CD workflows and monitoring for zero-downtime deployments.

Mobile Application Developer Nov 2024 – Jun 2025
White Matrix India

- Built and shipped cross-platform Flutter applications to Play Store and App Store; integrated JWT and Firebase Authentication for secure multi-provider login flows.
- Contributed to Express.js backend development, designing database schemas and implementing RESTful API endpoints consumed by mobile clients.
- Provisioned and configured application infrastructure on AWS EC2, implementing secure file uploads via S3 pre-signed URLs for client-facing media pipelines.

Education

Bachelor's Degree in Computer Application
Jamia Hamdard University Delhi
