SUMMARY

Forward deployed engineer with 2+ years of experience working directly with clients to turn business problems into production AI solutions. Builds agentic AI workflows, RAG systems and LLM integrations with Python, LangGraph, LangChain and pgvector, backed by full-stack delivery (React, TypeScript, Node.js, FastAPI), REST APIs and PostgreSQL. Owns work from first commit to production, including deployment, monitoring and LLM evaluation.

SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Dart

Agentic AI and LLMs: Agentic AI, AI agents, LangGraph, LangChain, LLM integration, RAG pipelines, prompt engineering, vector databases (pgvector)

LLM Evaluation and Observability: LangSmith (latency, token usage, output evaluation, behavioral drift), hallucination control

Full Stack: React, TypeScript, Node.js, FastAPI, Flutter, REST APIs, API integration

Databases: PostgreSQL, Supabase, SQL, database fundamentals, data pipelines, pgvector

Deployment and MLOps Basics: Docker, CI/CD, deployment, monitoring, Git, Redis queues, event-driven architecture

Client Delivery: Customer-facing implementation, requirement scoping, production troubleshooting, stakeholder communication

PROFESSIONAL EXPERIENCE

Forward Deployed Engineer (FDE) | Emilda Solutions | Calicut, India — Aug 2025 – September 30

- Worked directly with clients to understand business problems, then designed, deployed and refined AI and full-stack solutions from first commit to production.
- Built agentic AI and LLM-integrated applications for real enterprise workflows and presented architecture, limitations and trade-offs to business stakeholders and executives.
- Monitored live environments and resolved production bottlenecks, API crash loops and infrastructure failures independently.

Mobile Software Engineer | White Matrix | India — Sep 2024 – Jul 2025

- Built mobile apps in Flutter and Dart and backend services in Node.js and TypeScript, integrating REST APIs into live client environments.
- Wrote unit and integration tests, maintained Git-based CI/CD workflows and managed deployments for zero-downtime releases.

PROJECTS

Rozana Procurement Intelligence Engine – Agentic AI Workflow | Python, LangGraph, LangChain, LangSmith, FastAPI, PostgreSQL (Supabase) | 2026

- Built a 7-node LangGraph agent pipeline combining a deterministic calculation engine with LLM reasoning to replace manual purchasing decisions with structured AI recommendations.
- Evaluated and monitored LLM output in LangSmith (latency, token usage, correctness) and eliminated hallucinations by constraining the model to a strict narration layer.
- Ingested 893,437 rows of ERP data through SQL and FastAPI and fixed Supabase crash loops by enforcing batch processing limits.

Station Command – Full-Stack Enterprise Operations Platform | TypeScript, React, PostgreSQL (Supabase Edge Functions), Python | 2026

- Delivered a full-stack platform (React front end, PostgreSQL and Edge Functions back end) from requirements to go-live, replacing paper workflows for a 15-person operations team with zero downtime.
- Built a Python sync agent streaming 1,700+ daily transactions from embedded POS terminals; fixed sync stalls with timestamp-based, self-healing data drain loops.

TaskFlow – Asynchronous Backend and RAG Microservice | TypeScript, Node.js, Python, FastAPI, pgvector, Redis, Docker | 2025

- Built a RAG pipeline with pgvector and LangChain for semantic retrieval, and ran background queue processing on Redis across Dockerized REST API services.

EDUCATION

Bachelor of Computer Application (BCA) | Jamia Hamdard University, Delhi, India
